

Quality & Environment

OCS is from June 2016 certified according to ISO 9001 and ISO 14001.

OCS offers reliable and cost-effective internal transport systems of high quality and flexibility. The systems are clean and oil-free with low maintenance requirements. Our wide range of overhead conveyors, roller conveyors and belt conveyors offer great freedom of choice in terms of functionality, design and efficiency.

With skilled and motivated staff in dialogue with the customer our goal is to develop, manufacture and deliver products that always meet our customers' requirements and expectations. Right quality is our guarantee of profitability and long-term survival.

Basic principles to achieve our goal:

- By our employees have sufficient knowledge, high motivation and a good understanding of customers' demands and wishes, we can achieve;
 - High delivery precision
 - The right quality of our products
 - Reduce the environmental impact for instance - through the efficient use of resources
 - Achieve operational employees with the ambition to continuously improve
- We will through continuous and preventive work improve our quality and environmental performance, production and our business system.
- Our procedures and working methods must meet the requirements of ISO 9001 and ISO 14001 standards, to ensure high product quality, respect for the environment and a good business and work environment.
- The environmental work shall be characterized by a holistic approach and be guided by what is technically possible and economically feasible.
- The business must be conducted in such way to protect the environment by preventing pollution and raw materials and that energy is used efficiently.
- We will have a physical and psychological work environment that facilitates and highlights our employees' unique skills. We will take preventive measurements to reduce the risk of injuries and accidents.
- Damage to people, property or the environment should not occur because of fire. To achieve this, we work systematically to improve our fire protection program BUS - fire and evacuation system for systematic fire prevention.
- The authorities' various requirements are minimum standards that must be met.

Efforts with quality-, environmental-, working environmental-, and fire safety issues should be an integrated part of other business issues. The concern and responsibility for our common activities and the environment will then be a natural part of every employee's daily lives.
